Courses Connected by the Footprints We Leave FIG

Anthropology 270: Introduction to Biological Anthropology, Dr. Josh Snodgrass
Biology 121: Introduction to Human Physiology, Dr. Pat Lombardi
Anthropology 199: College Connections, Dr. Josh Snodgrass & FIG TA Emily Smallwood

Course Overview
Welcome to the U of O! This FIG is designed to link two courses that approach human biology from complementary perspectives. In addition to their shared focus on the fundamental structure and function of the human body, these courses will show you how an evolutionary approach can illuminate the role the environment plays in shaping human biology, behavior, and health. One of the principal goals of this FIG is to make these connections explicit and to focus on the overarching principles that link the subject matter in these two courses. A second goal of this FIG is to help you develop the skills and identify the resources you need to thrive academically and personally at the U of O.

Grading and Attendance Policies
This is a Pass/No Pass class. In order to pass the class you must attend all class meetings. If you must miss a class, you need to make every effort to let us know prior to class. In order to receive a pass in this class, you must also complete all the required assignments.
Course Requirements

Requirements for this course include the following:
- Attend all our regularly scheduled Tuesday class meetings
- Attend all our required meetings outside of the regular Tuesday class time
- Attend library tour
- Submit two sets of questions on *Why Zebras Don’t Get Ulcers*
- Prepare questions for the lab field trip
- Group research project presentation (Week 6 or 7)
- Meet with Amanda individually or as part of a small group
