

## How to add Holiday Cheer to your Banner Screen

Need a little extra color during the gray winter months? Tired of the same old drab Banner screen? Then change the default Banner screen colors to better suit your mood.

Banner allows users to change the color of nine screen elements:

1. Non iconic buttons
2. Canvas
3. Description prompts
4. Menu links canvas
5. Broadcast message canvas
6. Record highlighting
7. Scroll bar
8. Separator line
9. Menu tree canvas

The five that you'll notice the most:

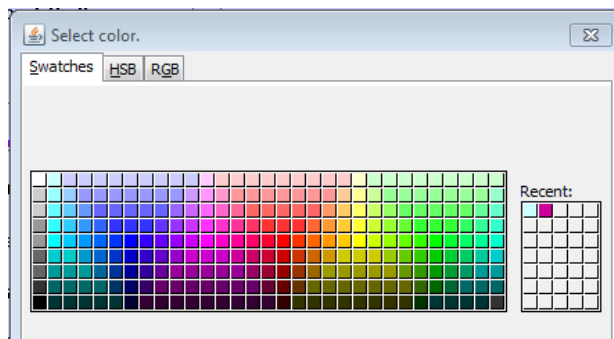

- 'Canvas' is the background color of 'query forms'. Choose a color you like and is easy to look at.
- 'Broadcast message canvas' is at the bottom of the general Welcome screen.
- 'Record highlighting' is a selected single line of detail, such as, one line of a JV. Choose a color that has good contrast from your 'canvas' color.
- 'Scroll bar'. Choose a color that compliments your 'canvas'.
- 'Separator line' is the line that visually differentiates Banner blocks. Choose a color that compliments your 'canvas' color.

**Here's how ...**

MENU: File >> Preferences >> Display Options

Under the "User Interface Color Settings" each screen element has 3 fields.

- a. The 'description' field identifies the screen element.
- b. The 'default value' field displays the default color for that element and its red/green/blue values.
- c. The 'user value' field displays the current user defined color for that element and its red/green/blue values. ***This is where you make your changes. Using the drop-down arrow, select a color from the displayed color chart. Click "OK". Repeat for each of the screen elements you wish to change.***

Save your changes.

MENU: File >> Save (or click the diskette icon)

*Now enjoy your new Banner screen.*
