## 5. Energy-momentum tensor

Consider the electromagnetic field in the absence of matter.

a) Show that the tensor field

$$H_{\mu}^{\ \nu}(x) = (\partial_{\mu}A_{\alpha}(x)) \frac{\partial \mathcal{L}}{\partial (\partial_{\nu}A_{\alpha}(x))} - \delta_{\mu}^{\ \nu} \mathcal{L}$$

obeys the continuity equation

$$\partial_{\nu} H_{\mu}^{\ \nu}(x) = 0 \quad (*)$$

note: Notice that  $H_{\mu}^{\ \nu}(x)$  is a generalization of Jacobi's integral in Classical Mechanics.

b) Show that (\*) also holds for

$$\tilde{T}_{\mu}^{\ \nu} = H_{\mu}^{\ \nu} + \partial_{\alpha} \psi_{\mu}^{\ \nu\alpha}$$

where  $\psi_{\mu}^{\ \nu\alpha}$  is any tensor field that is antisymmetric in the second and third indices,  $\psi_{\mu}^{\ \nu\alpha}(x) = -\psi_{\mu}^{\ \alpha\nu}(x)$ .

c) Show that  $\psi_{\mu}^{\ \nu\alpha}$  can be chosen such that  $\tilde{T}_{\mu}^{\ \nu}(x)=T_{\mu}^{\ \nu}(x)$ , which provides an alternative proof that  $T_{\mu}^{\ \nu}(x)$  obeys (\*).

(5 points)

## 6. Energy-momentum conservation in the presence of matter

Prove the corollary of ch. 1  $\S 2.3$ : In the presence of matter, the energy-momentum tensor obeys the continuity equation

$$\partial_{\nu} T_{\mu}^{\ \nu}(x) = \frac{-1}{c} F_{\mu}^{\ \nu}(x) J_{\nu}(x)$$

(2 points)

## 7. Energy-momentum tensor for a massive scalar field

Consider the massive scalar field from Problem 3:

$$\mathcal{L} = \frac{1}{2} \left( \partial_{\mu} \varphi \right) \left( \partial^{\mu} \varphi \right) - \frac{m^2}{2} \varphi^2$$

and the tensor field  $H_{\mu}^{\ \nu}$  defined analogously to Problem 5:

$$H_{\mu}^{\ \nu} = (\partial_{\mu}\varphi) \ \frac{\partial \mathcal{L}}{\partial (\partial_{\nu}\varphi)} - \delta_{\mu}^{\ \nu} \mathcal{L}$$

Determine  $H_{\mu}^{\ \nu}$  explicitly and show that

$$\partial_{\nu}H_{\mu}^{\ \nu}=0$$

hint: Use the Euler-Lagrange equation determined in Problem 3a).

(3 points)

.../over

## 8. Coulomb gauge

Consider the 4-vector potential  $A^{\mu}(x)=(\varphi(x), \mathbf{A}(x))$ . Show that one can always find a gauge transformation such that

$$\nabla \cdot \boldsymbol{A}(x) = 0$$

This choice is called Coulomb gauge.

(2 points)

$$\frac{\partial \mathcal{L}}{\partial \lambda} = \frac{\partial \mathcal{L}}{\partial \lambda} + \frac{\partial$$
