Core Community Specifications for Electron Microprobe Operating Systems:
Software, Quality Control, and Data Management Issues

INTERNATIONAL STANDARD **ISO 22489**

Microbeam analysis — Electron probe microanalysis for wavelength-dispersive spectrometry

Standards published and under development by ISO/TC202

Standards published

ISO 14595-2003	Electron probe microanalysis—Guide to specification of certified reference materials (CRMs)
ISO 14594-2003	Electron probe microanalysis—Guide to the determination of experimental parameters for wavelength dispersive spectrometry
ISO 15632-2002	Instrumental specification for energy dispersive X-ray Spectrometers (EDS)
ISO 22029-2003	EMSAMAS Standard file format for spectral data exchange
ISO 16700-2004	Scanning electron microscopy—Guidelines for calibration of image magnification

Standards under development

SC1/WG1	ISO 23633	EPMA terminology

systems utilize These systems cations, due to utilized at the unity includes change of ideas e and software

Talk Overview

- Intro to anthropology of technology
- “How does the internet affect society?”
- Society affects technology as much
 - Finnish reindeer herding, Tunisian timekeeping
- Technological choices - what? how study?
 - Operational sequences (*chaîne opératoire*)
- EPMA applications, suggestions, discussion

Why Topic?

- ISO, best practices, community specs
 - Documentation, calibration, consistent procedures
 - Not debating good vs bad -- complete picture?
- Variety of “non-technical” choices
 - Individual, organizational, economic, arbitrary
- How record choices? Study?
- Why adopt/reject procedures/tech?

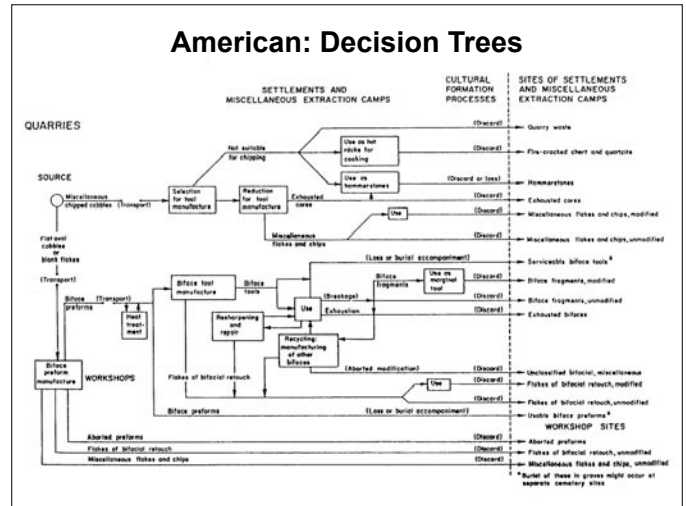

Japanese concept: *giho*

Highly patterned sequence

Structure behavior, routine

Reflects “rituals” common in Japanese culture

Aside: Would a cultural emphasis on “ritual” processes be reflected in software design or ideas about doing analyses?

French Ethnological School

- Cognitive behavior + stone tool replication
- Cultural use, origin of technology
- Social info in how objects used
 - Dancing, cooking food, building power plants
- How technology created, used
 - Socially-mediated body techniques
- Concern for processes

Marcel Mauss

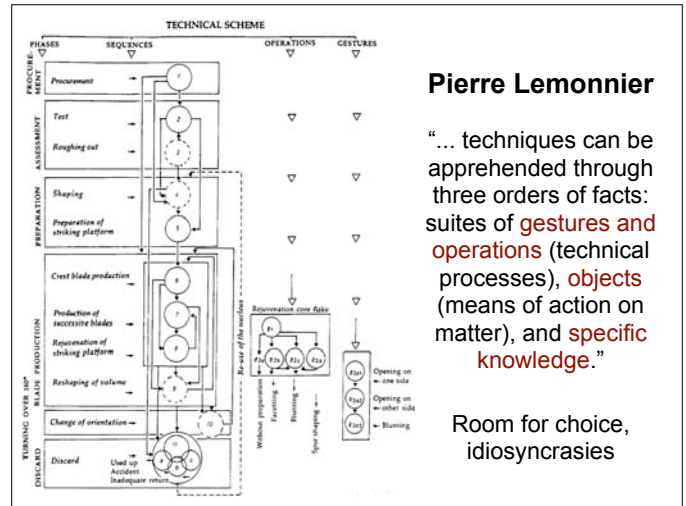

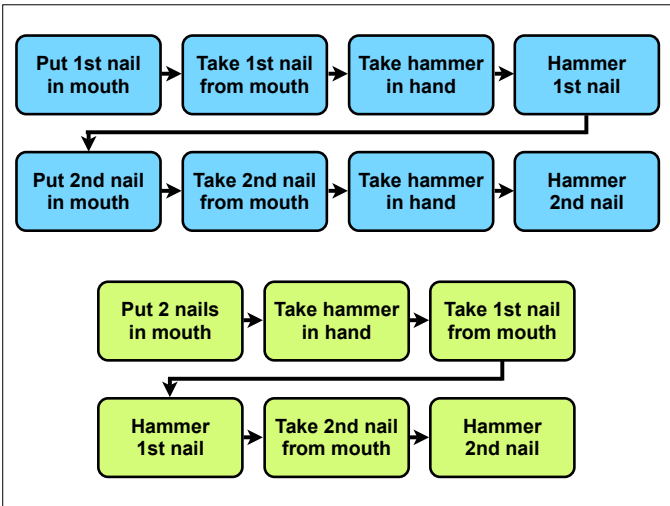

- *Les Techniques du Corps*, 1934
- Focus on physical movements, gestures
 - Integral to culture as language or religion
 - Arbitrary, culture makes efficient
 - Reflect individual/cultural “practical reason”
 - Body techniques a learned “craft”
- Energy into physical world via body

André Leroi-Gourhan

- Body a *tool*, energy applied to world
 - Scratching nose, planting potatoes, making jets
- Objects “incomplete” without actions
- “Biology of techniques” - tools like limbs
- *Enchainement* of techniques
 - Techniques: gestures/tools in syntax; sequence
 - **Sequence**: fixed and flexible, feedback

Chaîne Opératoire

- Processes, actions from artifacts
- Pin-point cultural aspects
- Start: raw material
- End: finished product
- Middle: not necessarily linear
- Frame: Fixed/strategic tasks
- Choice: Flexible/variable tasks

Pierre Lemonnier

“... techniques can be apprehended through three orders of facts: suites of **gestures and operations** (technical processes), **objects** (means of action on matter), and **specific knowledge**.”

Room for choice, idiosyncrasies

Pierre Lemonnier

- *Chaîne opératoire* variability; model “choices”
- Range of possibilities: forks vs chopsticks
- Technical variants reflect social phenomena
 - e.g., social control over strategic tasks
- Tech know-how + cultural practice
- When use/reject tech knowledge
 - "Unfavorable technical milieu"

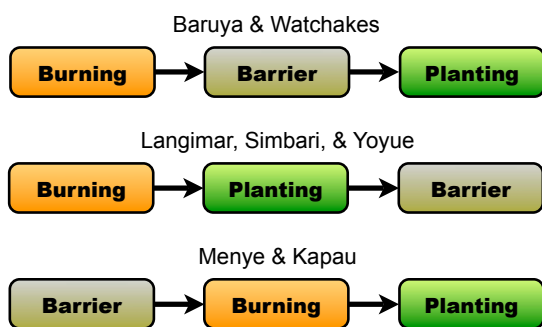

Anga tech variations

House, especially walls

Types of barriers

Arrow types, barbs

Anga agriculture: same final steps, different orders

Reflects non-technical “point of view” shared by groups

Use pole-lassos in summer, not winter

Diff explanations

Increasing use of pole-lassos

When use or not?

Choices as much social as technical

Herding Corrals

Wild Herding → Pastoralism → Commercial Ranch

Technological changes driven by social changes

Tunisian Timekeeping

- Oasis water divided among villages, farmers
- Complex water rights, social system
 - Communal waterclock, water supervisors
- French forced division by volume, not time
 - Increased hostility among villages
 - Less effective/accommodating system
- Like Balinese water temples, irrigation

Social Shaping

- Social, economic, legal, political contexts
 - e.g., Edison's electric light vs natural gas
 - Economic, etc. calculations society-specific
 - Failure if expensive, unattractive, poor fit, etc.
- Social groups play role in technology
 - Engineers, advertisers, consumers, etc.
- Path-dependence: "locked-in" to QWERTY

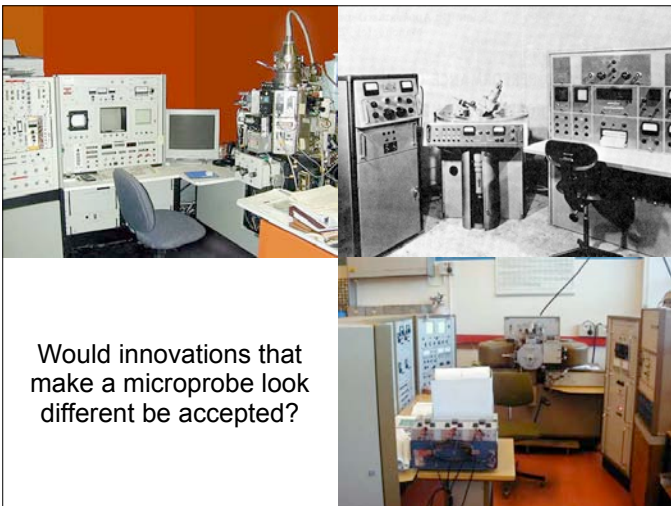

“Auto assembly-line workers prefer simple bumpers, which are easy to install; designers prefer sleek bumpers, which contribute to the styling of the car; the management prefers the least expensive bumpers to mini-mize costs and maximize profits; and the government is finally insisting on safety.”

Payson Sheets, 1975, *Behavioral Analysis and the Structure of a Prehistoric Industry*

Expectations about what a microprobe “looks like”

Preconceived ideas, expectations, tendency

Would innovations that make a microprobe look different be accepted?

Technological variants in EPMA

Rejected for technical reasons?

Didn't “fit” one of other contexts?

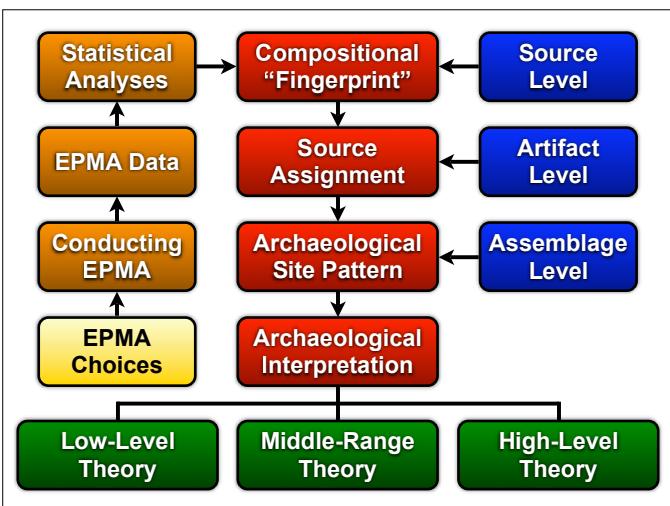

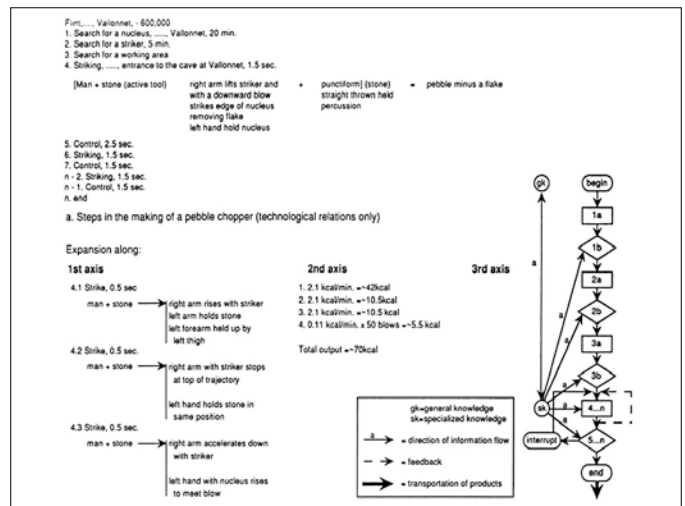

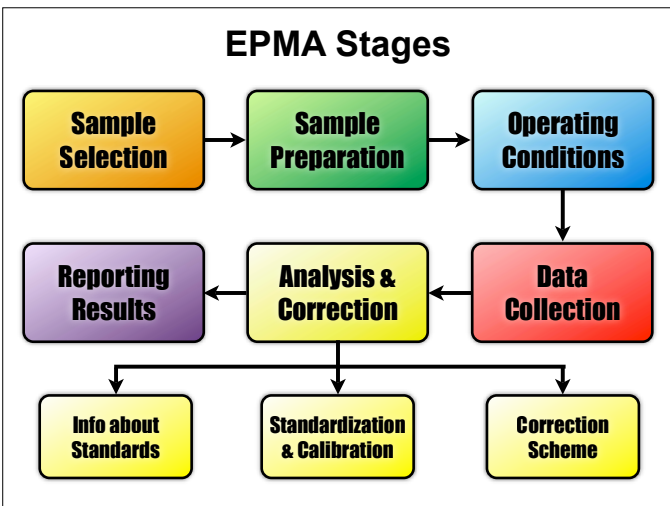

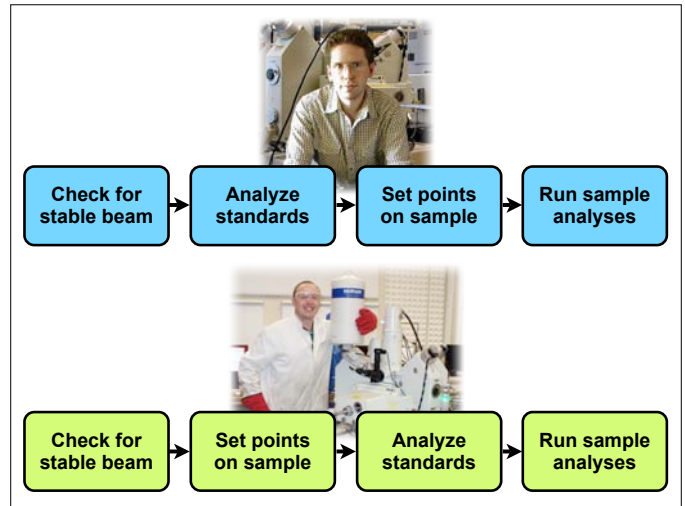

“We suspect that much of today's probe software's structure is a direct descendant of the days when 64K was a large amount of memory, hard disks were a luxury, and 8-inch floppies were the storage mode.”

Fournelle and Carpenter 2006

Stones to Probes

- Making stone tool, doing analysis not too different
- Material cannot be ignored, affects feedback
- Material response, feedback alters scheme
- Alter actions critically using know-how
- Consider results in light of what expected
- Assess new possibilities, adjust plans
- Undertake new actions after above

- ## Conclusions Suggestions
- Consider processes, arbitrariness, social factors
 - Analysts start with "intentional sequence"
 - What "mental templates" do analysts have?
 - Fluid, changing ideas about template?
 - Conceptual sequence vs actual?
 - Intermediate goals affect sequence?
 - Time to discuss? Ideas where choices occur?
