Acknowledgements: This is a work in progress, with much debt owed to the willingness of two individuals – John Umbeck and Jack Barron – to give out of their own stock of knowledge in a way that too few graduate students benefit from. Thanks also to Torben Drewes, who was among the first to encourage my interests in economics. Thanks to Tom Groll for his dogged assistance with tracking down some of the dated (i.e., pre-digital) material. In advance, I also tip my hat to those who will inform me of any additional material that they believe belongs in such a collection.

1 Scientific Methodology

Becker, G. S. (1962). Irrational behavior and economic theory. The Journal

2 The Nature of the Economic Problem

3 Value and Demand
