The Center for Applied Research in Education was formed by Bonnie Grossen for the specific purpose of supporting schools serving at-risk students with the technical expertise and knowledge gained through the scientific research work of the University of Oregon.

By working with the C.A.R.E. team of expert teachers and principals who have achieved remarkable results with traditionally low-achieving groups of students, your school will have access to the most up-to-date knowledge regarding what does or does not work in the on-going efforts to accelerate the academic growth of at-risk middle and high students to reach standards.
