Problems:

(1) Let $\gamma: \mathbb{R} \to \mathbb{R}^3$ be a smooth curve. Explain in what sense the definition of the velocity $\gamma'(t_0)$ from this course (and Lee’s book) agrees with the definition from the first time you learned multi-variable calculus.

(2) Lee, Problem 3-4.
(3) Lee, Problem 3-6.
(4) Lee, Problem 3-8.

Challenge problems (required for Math 532, optional for 432):

(5) Lee, Problem 3-5.
