

REVISED QUESTIONNAIRE

This questionnaire is due on Wednesday 26 September in class.

Are you in Math 413 or Math 513? What is your class standing (first or second year graduate, senior, etc.)?

What is your (intended) major?

Should I arrange a room for a weekly discussion meeting? (It looks like it would be Tuesdays 11–11:50 am. Please tell me if you want to come but can't make that time.)

For the two weeks I miss, do you prefer having a substitute at the usual class time, or make-up lectures outside the usual class time?

Should I arrange a two hour period for the midterm outside of class? (The evening of Friday 26 Oct. looks plausible, but is not decided.)

Have you ever used any form of \TeX ?

Please say what you can about your previous experiences with rigorous proofs in analysis? What courses did you take, where did you take them, when did you take them, how long were they (perhaps, 2 quarters, one semester, or two semesters), what textbooks did you use, and what grades did you get?

What is your general opinion of analysis?

Is there anything specific you particularly hope to get out of this course?

(Continue on back of page if needed.)
