

Structure of Wassermann's paper "Operator Algebras and Conformal Field Theory"

The above chart should be read from bottom to top. A thin line from n to m (m is higher than n in the chart) indicates that the *statements* of the results of section n should be understood before reading section m . A thick line means that the *proofs* in section n are also important, and that they will be used in section m . A dotted arrow from n to m indicates a weak dependence of section m on section n . The sections are grouped in 6 chapters, just like in the paper.
